

# WE'VE MADE OUR BESTSELLING FANFOLD SIDING UNDERLAYMENT EVEN BETTER

You already depend on GreenGuard's P14 underlayment for your residing jobs. Now we've enhanced the performance and created P1450, the new standard for siding underlayment.

**Advanced Layflat Design** P1450 features an advanced cut-and-fold hinge design that lets it lay perfectly flat, giving you a smooth surface for installing new siding.

**Superior Firmness** The stiffer board creates a solid, level nailing surface that doesn't conform to the shape of the siding underneath.

**Advantages of XPS** As always, the P Series provides all the benefits of XPS, including low moisture absorption, breathability, no crumbling, and easy handling and cutting.

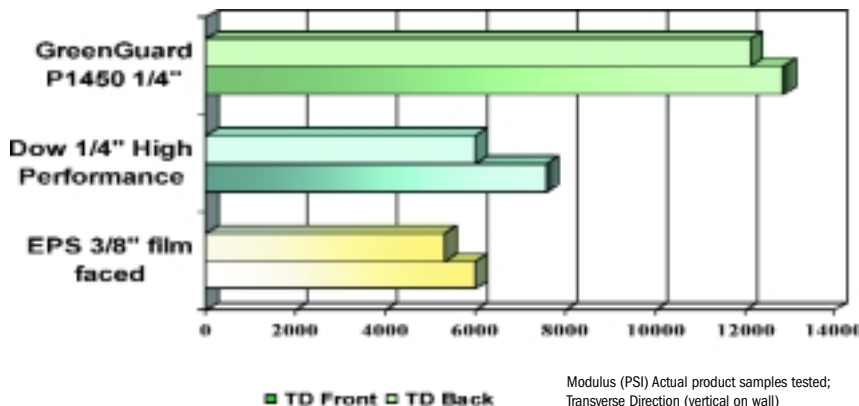

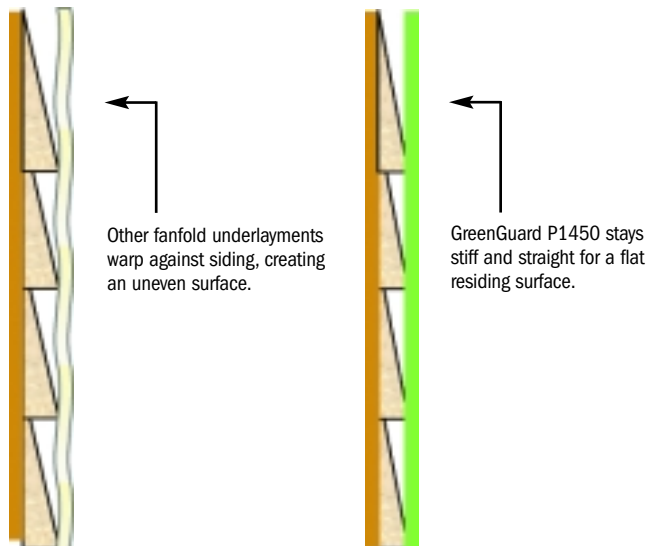

**FP1450** FP1450 features all the advantages of P1450, plus a perforated reflective facer for enhanced thermal performance.

For more information, contact your GreenGuard sales representative or visit [green-guard.com](http://green-guard.com).

## GREENGUARD VS. OTHER FANFOLD UNDERLAYMENTS

**Compliance** — GreenGuard P1450 and FP1450 comply with all relevant building codes. For the most current compliance information, go to [green-guard.com](http://green-guard.com).

- GreenGuard P1450 and FP1450 are made of synthetic materials that are generally recognized as not providing a food source for insects, fungus, mold, or mildew. GreenGuard fanfold underlayments should always be properly installed and stored.
- Refer to our website and product literature for product usage, properties, and safety and warranty information.
